RELEVANT COURSES

POL474 - Policy & Policy Analysis

A comprehensive exploration of public policy in which political issues and their relevant policies are evaluated. Frameworks for analyzing existing and hypothetical policies, and methodologies for constructing policy proposals were taught through group discourse.

STA302 - Methods of Data Analysis

Using regression modalities to draw inferences from data sets. Also learning various mechanisms for identifying and utilizing optimal models, and determining causality.

POL419 - Quantative Methods and Data Analysis

An advanced course in quantitative empirical research methods for political science. Inferences are drawn from existing data to create analytical frameworks for examining global and domestic policy concerns.
